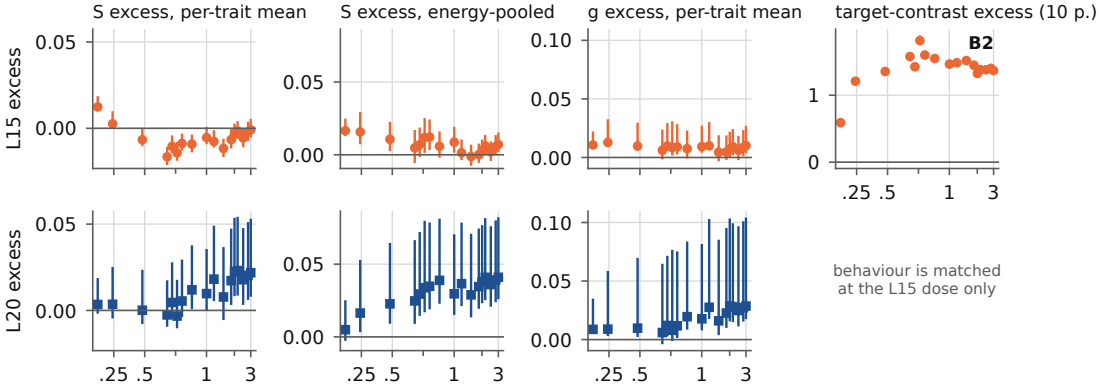
impulsiveness: SFT trajectory minus scaled DPO at matched dose



Trajectory minus DPO-only ladder at matched functional dose; paired question bootstrap, B = 1000, shared draws, dose matched within each draw; base base_cmask; geometry over 10 occupational personas; contrast on the same 10 personas, at the L15 dose. Pointwise 95% intervals (evaluation only, one training seed).
Energy-pooled S is a different estimand from the per-trait mean. Goodness and sycophancy have no prespecified target contrast.
